DETAILED ACTION

1. This office action is in response to applicant's response to non final office action filed on September 9, 2009 in which claims 1, 4-7, 11-22, 24, 26, 28, 30, and 35 are presented for further examination.

In response of Applicants amendments and remarks arguments with respect to the rejection of claims 1, 4-7, 11-22, 24, 26, 28, 30, and 35 under Prompt et al (US 2006/0020586) and Willse et al (US 2004/0059736 A1) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn.

Reason for Allowance

2. The following is an examiner's statement of reasons for allowance: The present invention relates to a Method of Constructing Preferred Views of Hierarchical data. The closest prior art Prompt et al (US 2006/0020586) is directed to a System and Method for Providing access to databases via directories and other hierarchical structures and interfaces. Willse et al (US 2004/0059736 A1) is directed to Text analysis techniques. However, Prompt and Willse either singularly or in combination, fail to anticipate or render obvious the recited features "A method of presenting data from a hierarchical data source, said method comprising the steps of: (i) constructing a first view of the hierarchical data source; (ii) obtaining an occurrence probability of at least one context data from at least the first view of the hierarchical data source; (iii) identifying a compulsory entity in the first view; (iv) selecting a context entity from

Art Unit: 2158

the first view and the context data based on the occurrence probability; and

(v) presenting a hierarchical data structure, wherein the hierarchical data structure is a subset of the hierarchical data source, comprising a plurality of context data, wherein each of the plurality of context data corresponds to the identified compulsory entity and the selected context entity, wherein the hierarchical data structure is assigned a score equal to an occurrence probability of an ancestor node of the compulsory entity given the occurrence probability of the context data associated with the compulsory entity, and the context entity is selected from the group consisting of: (a) the ancestor node; (b) a first set of nodes along a directed path in the hierarchical data source from the ancestor node to the compulsory entity; (c) a second set of nodes selected from a descendent node of the ancestor node in the first view, each of the second set of nodes being selected based on a corresponding occurrence probability, said occurrence probability being derived from the occurrence probability of the ancestor node; (d) a third set of nodes selected from a descendent node of the ancestor node in the first view based on a corresponding distance from each of the third set of nodes to the ancestor node in the first view; and (e) a fourth set of nodes selected from a descendent node of the ancestor node in the first view based on a corresponding distance from each of the fourth set of nodes to the compulsory entity in the first view.”. These features in conjunction with all other limitations of the dependents and independent claims render claims 1, 4-7, 11-22, 24, 26, 28, 30, and 35 (Renumbered 1-22) allowable.

Art Unit: 2158

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
